

CTC MailTag System

Quick Overview

Spam Tagging - up to 50 mailboxes ONLY \$25.00 (monthly)

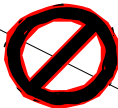

Unsolicited junk email (spam) has become increasingly prevalent and difficult to control without the proper technologies to fight this network-draining, cost-prohibitive nuisance. Today, between 45 and 50 percent of email is considered spam. By the year 2007, this estimate is expected to rise to almost 70 percent.

CTC has the answer to this problem, our cost-effective solution – CTC MailTag. Our CTC MailTag system will dramatically reduce the number of unwanted emails showing up in your inbox every day. Some of the benefits to our system are:

- SLS/Blacklist lookup and discard of email from these servers.
- Attachments are virus scanned BEFORE they get to users' inboxes.
- Known-hostile attachments are stripped BEFORE they get to users' inboxes.
- Automatic mail bag setup so if your server is down, mail will queue on our server until your server is back up so no email is lost.
- Subject of email is tagged with [Probable Spam] if CTC MailTag System thinks the email is spam – NO EMAIL IS DELETED! (This keeps false-positives from being discarded by our system)
- Bayesian and Heuristical Analysis of all email.
- Rules on the client machine to move tagged email from the inbox to a sub-folder of the inbox keeps this mail from cluttering your inbox.
